

ceramico

Almora - Morocco

'The perfect of imperfect'

Ondertussen is het al 45 jaar geleden dat Ceramico van start ging met het leveren van tegels en natuursteen. Het aantal vloeren en wanden, binnen én buiten, dat we met onze producten een blijvende schoonheid hebben meegegeven, is ontelbaar. En daar zijn we trots op. Keramiek en natuursteen is niet alleen ons beroep, het is door de jaren heen een echte passie geworden. Wij waren destijds pioniers, niet alleen door het enorme aanbod, maar ook door de manier waarop we onze producten voorstelden.

Ceramico was de eerste die de pracht en kracht van tegels en natuursteen op grotere vlakken in de verkoopruimte presenteerde. Die pioniersrol zijn we altijd blijven spelen en dat zullen we blijven doen, bijvoorbeeld met onze vernieuwde website. Bezoekers een nog betere voorstelling en inleving bezorgen bij de keuze van hun tegels en natuursteen: dat is de insteek van de volledig vernieuwde website van Ceramico. Neem gerust een kijkje en laat je verrassen door de enorme verscheidenheid van ons aanbod. Heb je je keuze gemaakt? Kom dan even naar de toonzaal om het product van dichtbij te bekijken of vraag een staal aan via onze stalendienst. Als pionier in de natuursteensector zijn wij graag vernieuwend, maar we hebben ook oog voor verbetering. Precies daarom kregen we als één van de eersten in de sector het label 'CertiKera' en zijn we ook al jarenlang de fiere drager van het quality label" van Febenat, de federatie van de Benelux natuursteenbedrijven. Alle onze natuurstenen zijn trouwens conform de geldende CE-normen.

In 1976 was het de bedoeling om de klanten naar onze toonzaal te krijgen via 'mond-tot-mond'-reclame. Hoewel we momenteel in een door multimedia overheerste wereld leven, halen we in onze showroom nog steeds het grootste bezoekersaantal via 'mond-tot-mond'-reclame. Vandaag krijgen we de "derde generatie" klanten letterlijk over de vloer. Een mooier bewijs van een trouw en tevreden cliënteel kunnen we ons niet voorstellen. In de loop van de voorbije jaren hebben wij trends zien komen en gaan en ... terugkomen. Ceramico volgt alle trends op de voet, wij houden graag de vinger aan de pols. Dag na dag gaan onze specialisten op zoek naar nieuwe tegels, nieuwe natuursteen en nieuwe ontwikkelingen om onze woningen te betegelen. De grote uitdaging is deze nieuwe materialen met de nodige deskundigheid op de markt te brengen. We willen al die nieuwigheden niet alleen 'tonen', maar ook onze klanten adviseren over nieuwe plaatsingstechnieken en meteen ook aantonen dat onze producten gemakkelijk in onderhoud en vooral ook milieuvriendelijk en duurzaam zijn.

Prijzen zijn belangrijk, maar nog belangrijker is de duurzaamheid van onze producten. Wij houden rekening met de ecologisch voetafdruk en de werkomstandigheden bij onze buitenlandse leveranciers. Zij worden onafhankelijk gecontroleerd via onverwachte audits ter plaatse. Eenmaal de natuursteen bij ons geleverd wordt, houdt het niet op. We willen onze producten ook in de allerbeste omstandigheden bewaren om ze in perfect staat bij onze klanten af te leveren. In Zedelgem beschikken we over een 6.000 m2 groot, overdekt magazijn om de zorgvuldig geselecteerde producten tegen alle weersomstandigheden te kunnen beschermen. Importeren, verkopen en leveren is maar één aspect van Ceramico. Wij koppelen daar ook een onberispelijke service aan vast. Een professioneel, maar evenzeer creatief verkoopteam staat klaar om de bezoeker deskundig advies te geven. Ook architecten en binnenhuisarchitecten staan we met raad en daad bij. Wij zorgen graag voor een prijsopfferte, gratis, op maat en binnen het vooropgesteld budget. Na aankoop begeleiden wij onze klanten in het plaatsen en onderhoud. Via onze technische info houden wij alle informatie over onderhoud en plaatsing nauwkeurig bij. Onze professionele begeleiding maakt dat de bekendste wereldmerken ons benaderen om hun gamma in ons aanbod op te nemen. Wij hopen in de toekomst, samen met u, nog beter te kunnen inspelen op uw vraag naar tegels en natuursteen om zo de gevestigde waarde te blijven in uw regio.

PETROGRAPHIC EXAMINATION - NATURAL STONE TEST METHODS
Standard UNI EN 12407

This Test Report is issued in English on request of the Client. The original Italian version exists.

DATE OF THE TEST REPORT	04/07/2017	N° OF TEST REPORT	16897-237-279	
CLIENT	PROMOMARBRE	SAMPLE	1	UNI EN 1341, 1342, 1343, 1469, 12057, 12058
DATE OF SAMPLING	07/04/2017	SOURCE OF SAMPLING	From pallets	
DATE OF DELIVERY	27/04/2017	ADDRESS	Zone Industrielle AIN ATIQ, Marocco	
Name of the Supplier	Client			
BEGINNING OF THE TEST	12/05/2017	END OF THE TEST	01/06/2017	CONDIZIONI METEO Sereno
Petrographic Name of the stone	Litharenite	Commercial Name of the stone	Kahla Grey	
Country and region of extraction	Morocco	Surface finish of the sample	Polished	

MACROSCOPIC DESCRIPTION

	It is a sedimentary rock massif and compact with abundant bioclasts. It has gray colour with bioclasts whose colour can change from white and black. Its colour changes from Light olive gray 5Y 6/1 and Pale yellowish brown 10YR 6/2 with spots of Olive gray 5Y 4/1 and of Med dark gray 4N according to the Rock Color Chart of the Geological Society of America. The rock is medium coarse grained and its main constituents are abundant bioclasts littler than 1 cm heterogeneously oriented. Some closed stylolitic joints and micro-pores heterogeneously widespread are present as well. The material looks not weathered, it reacts intensely when in contact with hydrochloric acid and can be scratched with a metallic tip.
---	--

MICROSCOPIC DESCRIPTION (thin section)

	It is a sedimentary rock formed in transitional high energy area, between the zone of carbonate sediments and siliciclastic ones. It has heterogeneous texture with compositional patches, massive. Its texture is mixed changing from organic-sedimentary, politic and clastic. The constituents of the rock are usually littler than 6 mm, only few clasts can be up to sub centimetric. The support is granular. Allochemical components are of various types: bioclasts such as: fragments of bivalves, brachiopods, echinoderms; algae and foraminifera maybe also agglutinating; peloids, ooids, also with terrigenous nucleus; aggregate grains; intraclasts.
	Terrigenous components are litter than 0.5 mm and are composed of quartz, flint fragments, rare feldspars, terrigenous lithoclasts such as marble fragments from sub angular to sub rounded, sometimes with dolomitic carbonate; micritic lithoclasts with organogenic tritume, biosparite and oosparite fragments, compact sandstones with quartz clasts littler than 0,1 mm. The ortochemical constituent is sparite while no micrite can be seen.
DISCONTINUITY:	few intergranular and intragranular pores are scattered into the sections and closed stylolitic joints are present too.
ALTERATION:	not one

PETROGRAPHIC DEFINITION (EN12407 e EN12670):	LITHARENITE (Folk, 1974) LITHIC ARENITE (Pettijohn at al., 1972) (Sedimentary Rocks Classification Charts)
COMMERCIAL NAME:	KAHLA GREY

DETERMINATION OF APPARENT DENSITY
NATURAL STONE TEST METHODS
Standard UNI EN 1936

This Test Report is issued in English on request of the Client. The original Italian version exists.

DATE OF THE TEST REPORT	04/07/2017	N° OF TEST REPORT	16897-237-277	
CLIENT	PROMOMARBRE	SAMPLE	1	UNI EN 1469 - 12057 - 12058
DATE OF SAMPLING	07/04/2017	SOURCE OF SAMPLING	From pallets	
DATE OF DELIVERY	27/04/2017	ADDRESS	Zone Industrielle AIN ATIQ, Marocco	
Name of the Supplier	Client			
BEGINNING OF THE TEST	22/05/2017	END OF THE TEST	24/05/2017	WEATHER CONDITIONS Clear

Petrographic Name of the stone	Litharenite
Country and region of extraction	Morocco
Commercial Name of the stone	Kahla Grey
Surface finish of the sample	Sawn surface

Form and size of the specimens: prism (180x60x30) mm
Apparent volume: 324 ml (> 60 ml)
Ratio surface / volume: 0,11 mm⁻¹ (between 0,08 mm⁻¹ and 0,20 mm⁻¹)
Water temperature in °C: 21,2 Water density (kg/m³): ρ_m 998

Specimen n°	Mass of the dried specimen (g) m _{di}	Mass of the saturated specimen (g) m _{si}	Mass of the specimen immersed in water (g) m _{hi}	Apparent density (kg/m ³) ρ _{bi}	Open porosity (%) ρ _{oi}
1	878,97	884,22	554,96	2.664	1,59
2	885,80	892,56	558,91	2.650	2,03
3	885,35	890,72	559,16	2.665	1,62
4	875,98	883,64	552,42	2.639	2,31
5	879,92	885,59	555,61	2.661	1,72
6	876,21	884,25	553,06	2.640	2,43

$$\rho_b = \text{Average} \sum \rho_{bi} = \text{Average} \sum [m_{di}/(m_{si}-m_{hi}) \times \rho_h] = 2.653 \text{ kg/m}^3$$
$$\rho_o = \text{Average} \sum \rho_{oi} = \text{Average} \sum [(m_{si}-m_{di})/(m_{si}-m_{hi}) \times 100] = 1,95 \%$$

where ρ_b is the average apparent density, in kilograms for cubic metre.
ρ_o is the open porosity expressed by the ratio of the volume of open pores and the apparent volume in %.

This Test Report refers only to the tested samples.
